

Title

The city and its restaurants in a pandemic

Research Topic

Topic: I am visualising the impact of COVID19 on the NYC food service industry because I want to show that it has been harmed considerably and highlight the changes the city as a whole might undergo as a result

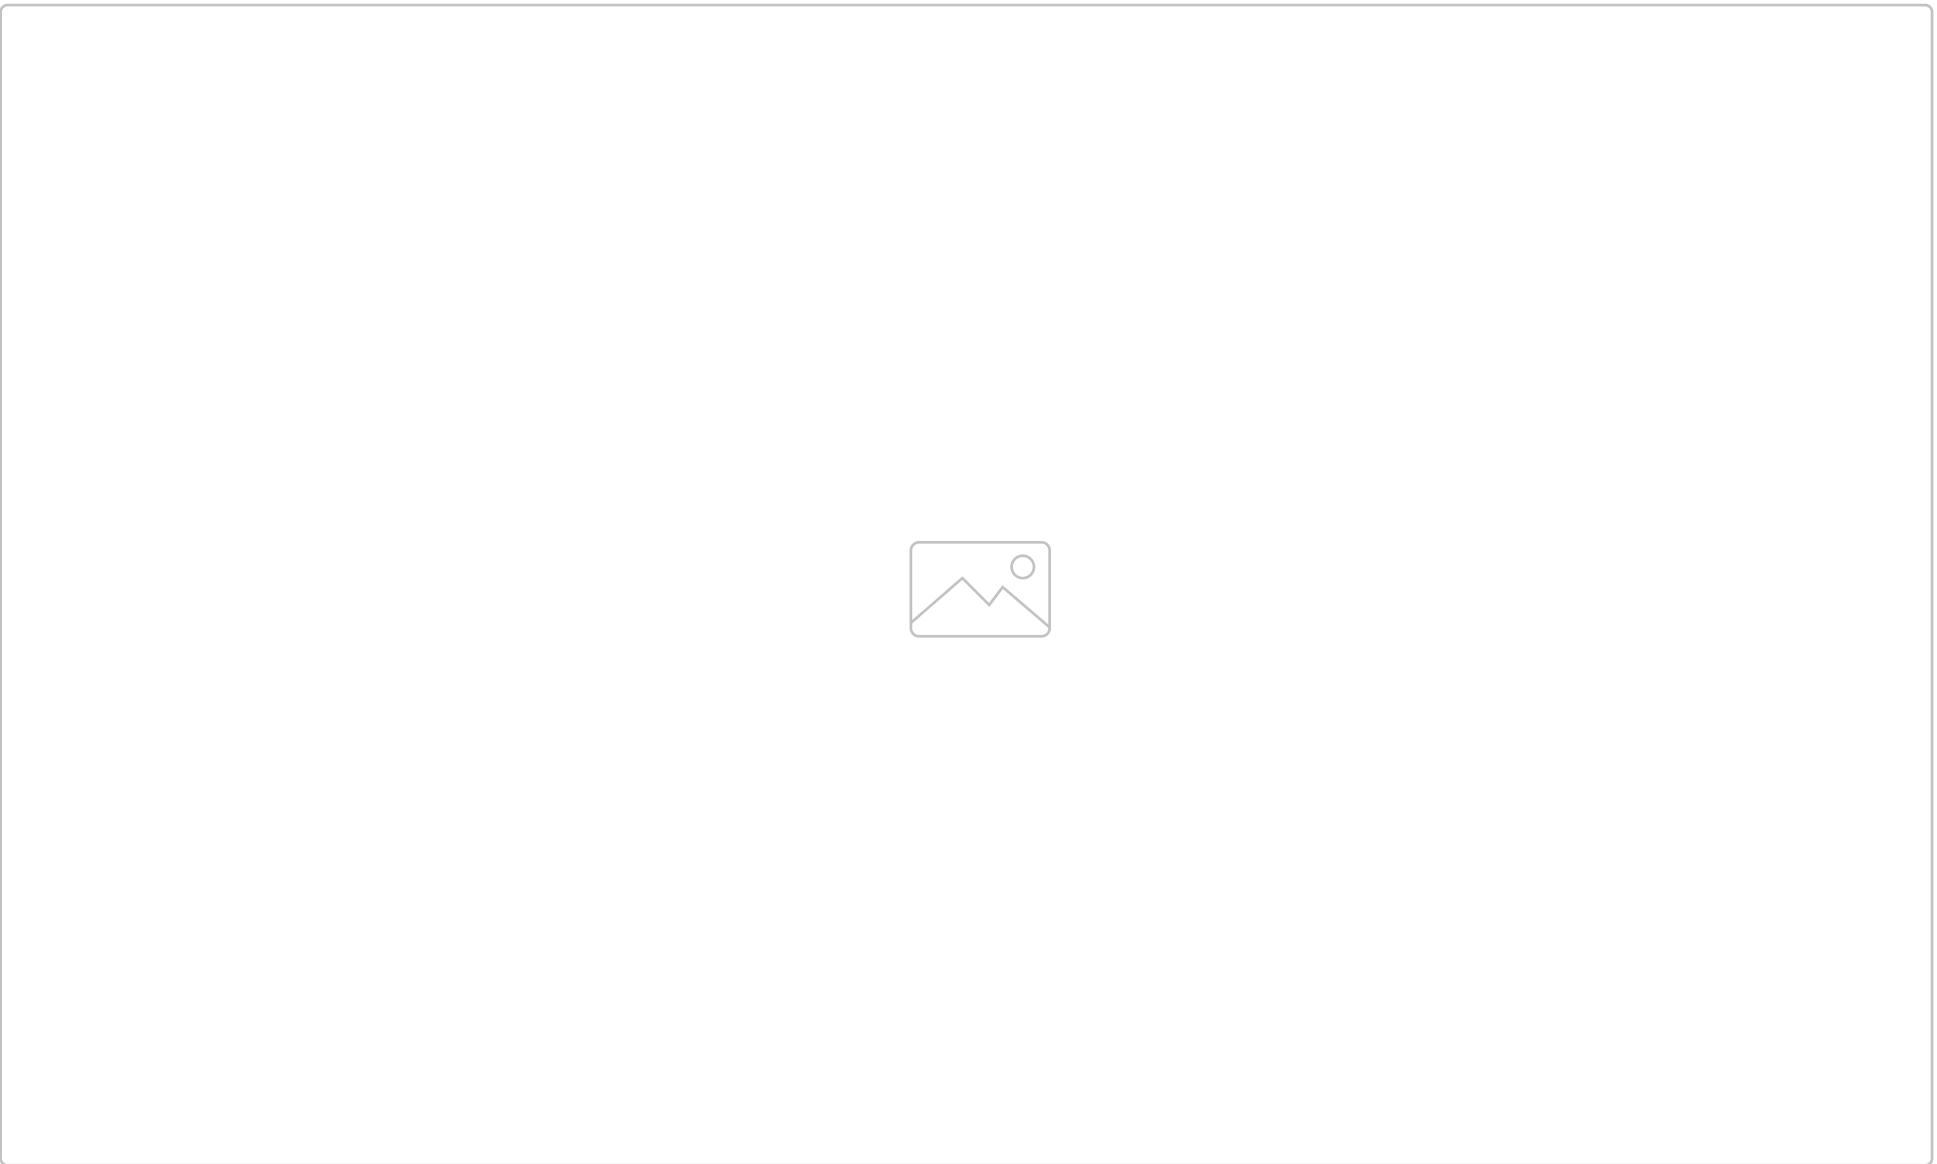

Audience: People who live in NYC, food industry, city officials.

Prior expectation of knowledge from audience: They should know about the COVID19 lockdowns and reasoning behind why restaurants and bars were shut down in order to curtail the spread.

Distribution channel: They will engage with an online data-driven story and will be able to interact with many of the visualisations (especially those with many dimensions like the federal pay support data). Often, the scrolling will trigger events on the same visualisation 'canvas' and transform.

Ask from the audience: Mostly scroll, explore filters and look around the hospitality industry around their neighbourhoods.

Overview
